                                                                                                                                                                                                                                   Sequence 18367, Application US/09252991A

Patent No. 6551795
GENERAL INCORMATION:
APPLICAMTE MATC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PLILNG DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
SEQ ID NO 18367
LENGTH: 68
                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

SEQ ID NO 163
LENGTH: 174
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: Flinn, Barry
APPLICANT: Lasham, Annette
TITLE OF INVENTION: Compositions affecting programmed cell
TITLE OF INVENTION: death and their use in the modification of forestry plant develor
Sequence 31533, Application US/09252991A

Patent No. 6551793
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR PILING DATE: 1999-02-18

patent No. 575484

GENERAL INFORMATION:

APPLICANT: Ward, Michael

APPLICANT: Weiss, Geoffrey L.

APPLICANT: Lorch, Jeffrey D.

TITLE OF INVENTION: Purification and Molecular Cloning of EG

TITLE OF INVENTION: III Cellulase

NUMBER OF SEQUENCES: 11

CORRESPONDENCE ADDRESS:

ADDRESSES Genencor International

STREET: 180 Kimball Way

CITY: South San Francisco

US-09-632-575-31
Sequence 31, Application US/09632575
Patent No. 6638465
GENERAL INFORMATION:
APPLICANT: Galfetti, Peter
APPLICANT: Mitchinson, Colin
TITLE OF INVENTION: Mutant Edili Cellulase, DNA Encoding
TITLE OF INVENTION: Mutant Edili Compositions and Methods for Obtaining Same
FILE REFERENCE: GC629
CURRENT APPLICATION NUMBER: US/09/632,575
CURRENT FILING DATE: 2000-08-04
NUMBER OF SEQ ID NOS: 54
SOFTWARE: FastSEQ for Windows Version 4.0

squence 1, Application US/09633084

patent No. 6407046

graduance 1, Trocky

APPLICANT: Fowler. Timothy

TITLE OF INVENTION:
TITLE OF INVENTION: Such EGIII Cellulase, DNA Encoding
TITLE OF INVENTION: Such EGIII Compositions and Methods for Obtaining Same
TITLE OF INVENTION: Such EGIII Compositions and Methods for Obtaining Same
CURRENT APPLICATION NUMBER: US/09/633,084

CURRENT FILING DATE: 2000-08-04

PRIOR APPLICATION NUMBER: 09/146,770

PRIOR PRIOR FILING DATE: 1998-09-03

NUMBER OF SEQ ID NOS: 4

SEQ ID NO 1

ENGTH: 232

LENGTH: 232
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Sequence 1, Application US/10075872

Sequence 1, Application US/10075872

Sequence 1, Application US/10075872

GENERAL INFORMATION:

APPLICANT: FOWLER, Timothy

TITLE OF INVENTION: Such EGIII Cellulase, DNA Encoding

TITLE OF INVENTION: Such EGIII Compositions and Methods for Obtaining Same

FILE REPERBUCE: GC546

CURRENT APPLICATION NUMBER: US/10/075,872

CURRENT FILING DATE: 2002-02-13

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FRASERQ for Windows Version 3.0
Sequence 1, Application US/09146770
Patent No. 6187732
GENERAL INFORMATION:
APPLICANT: FOWLEr, Timothy
TITLE OF INVENTION: Mutant EGIII Cellulase, DNA Encoding
TITLE OF INVENTION: Such EGIII Compositions and Methods for Obtaining Same
TITLE OF INVENTION: Such EGIII Compositions and Methods for Obtaining Same
TITLE REFERENCE: GG546
CURRENT FILING DATE: 1998-09-03
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 33, Application US/09632575

| Sequence 33, Application US/09632575
| Patent No. 6635465
| GENERAL INFORMATION:
| APPLICANT: Gualfetti, Peter
| APPLICANT: Mitchinson, Colin
| APPLICANT: Ropp, Traci M.
| TITLE OF INVENTION: Mutant EGIII Cellulase, DNA Encoding
| TITLE OF INVENTION: Mutant EGIII Cellulase, DNA Encoding
| TITLE OF INVENTION: Mutant EGIII Compositions and Methods for Obtaining Same
| TITLE OF INVENTION NUMBER: US/09/632,575
| CURRENT APPLICANTION NUMBER: US/09/632,575
| CURRENT APPLICANT OF MINDORS 54
| NUMBER OF SEQ ID NOS: 54
| SEQ ID NO 33
| LENGTH: 234
| TYPE: PRT | TYPE: P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Sequence 34, Application US/09632575
; Sequence 34, Application US/09632575
; Sequence 34, Application US/09632575
; Patent No. 6653665;
GENERAL INFORMATION:
APPLICANT: Gualfetti, Peter
; APPLICANT: Mitchinson, Colin
APPLICANT: Mitchinson, Colin
; APPLICANT: Ropp, Traci M.
; TITLE OF INVENTION: Mutant EGIII Cellulase, DNA Encoding
; TITLE OF INVENTION: Such EGIII Compositions and Methods for Obtaining Same
; TITLE OF INVENTION WUMBER: US/09/632,575
; CURRENT FILING DATE: 2000-08-04
; NUMBER OF SEQ ID NOS: 54
; SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 34
; LENCTH: 234
; TYPE: PRT
; ORGANISM: Hypocrea schweinitzii
US-09-632-575-34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-847-946A-41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Function: catalyzes the oxidation of an L-arginine guanidino nitrogen and of NADPH
C; Superfamily: nitric-oxide synthase; flavodoxin homology; NADPH-ferrihemoprotein reduct
C; Keywords: blocked amino end; calmodulin binding; chromoprotein; FAD; flavoprotein; FMB
F; 491-509/Region: calmodulin binding #status predicted
F; 520-1159/Domain: NADPH-ferrihemoprotein reductase homology <FEH>

Sy4915

Sy1915

Synechocystis sp. (strain PCC 6803)

Nylternate names: protein s110656

C;Species: Synechocystis sp.

Synechocystis sp.

Synechocystis sp.

C;Date: 25-Apr-1997 #sequence_revision 25-Apr-1997 #text_change 08-Oct-1999

C;Accession: Sy4915
